QuickPhone — Context Diagram (physical)

The whole system as one process and the five external entities it serves; flows match the Level 0 diagram

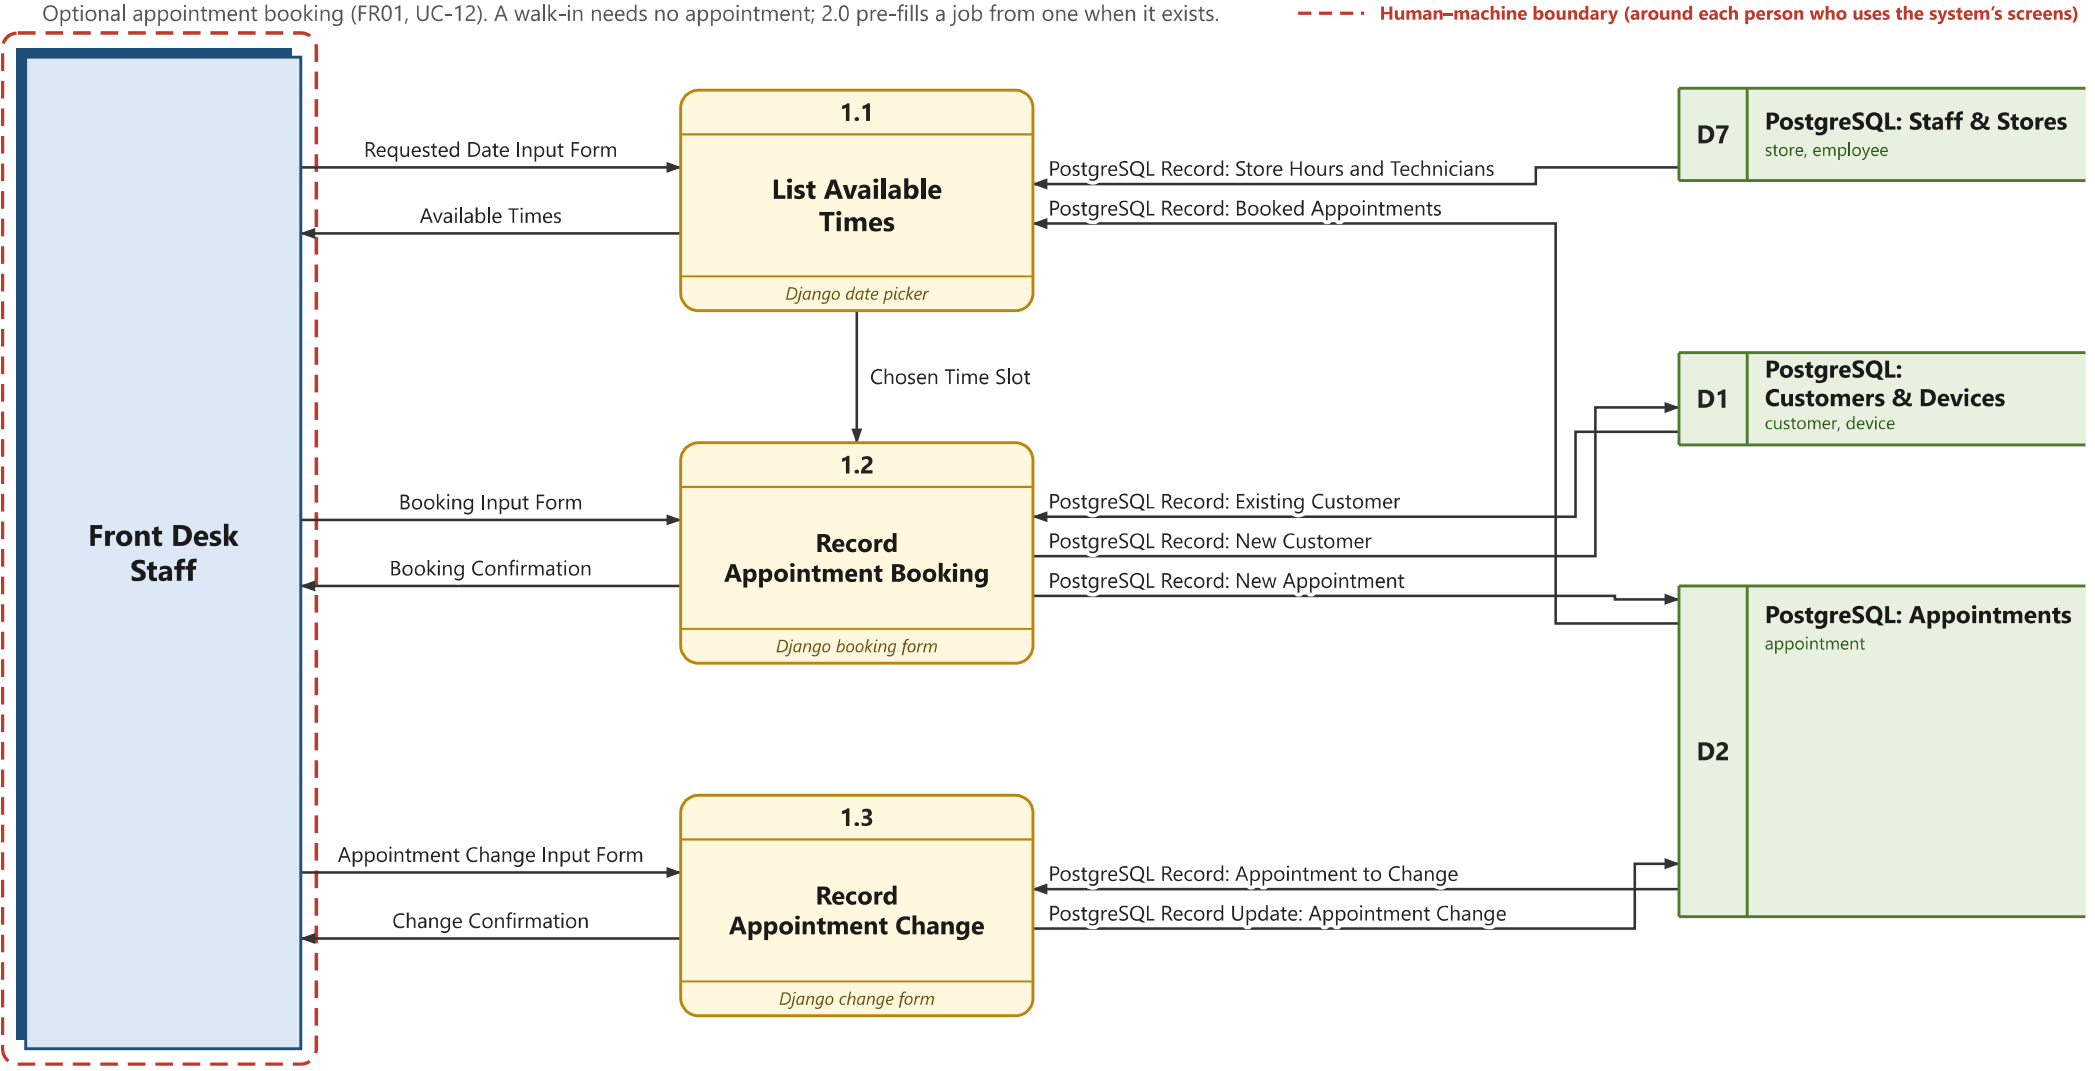

QuickPhone — Level 0 DFD (complete) (physical)

All nine processes, seven data stores and five external entities, each drawn once. Each line is one data flow; its name sits beside the process it leaves or enters.

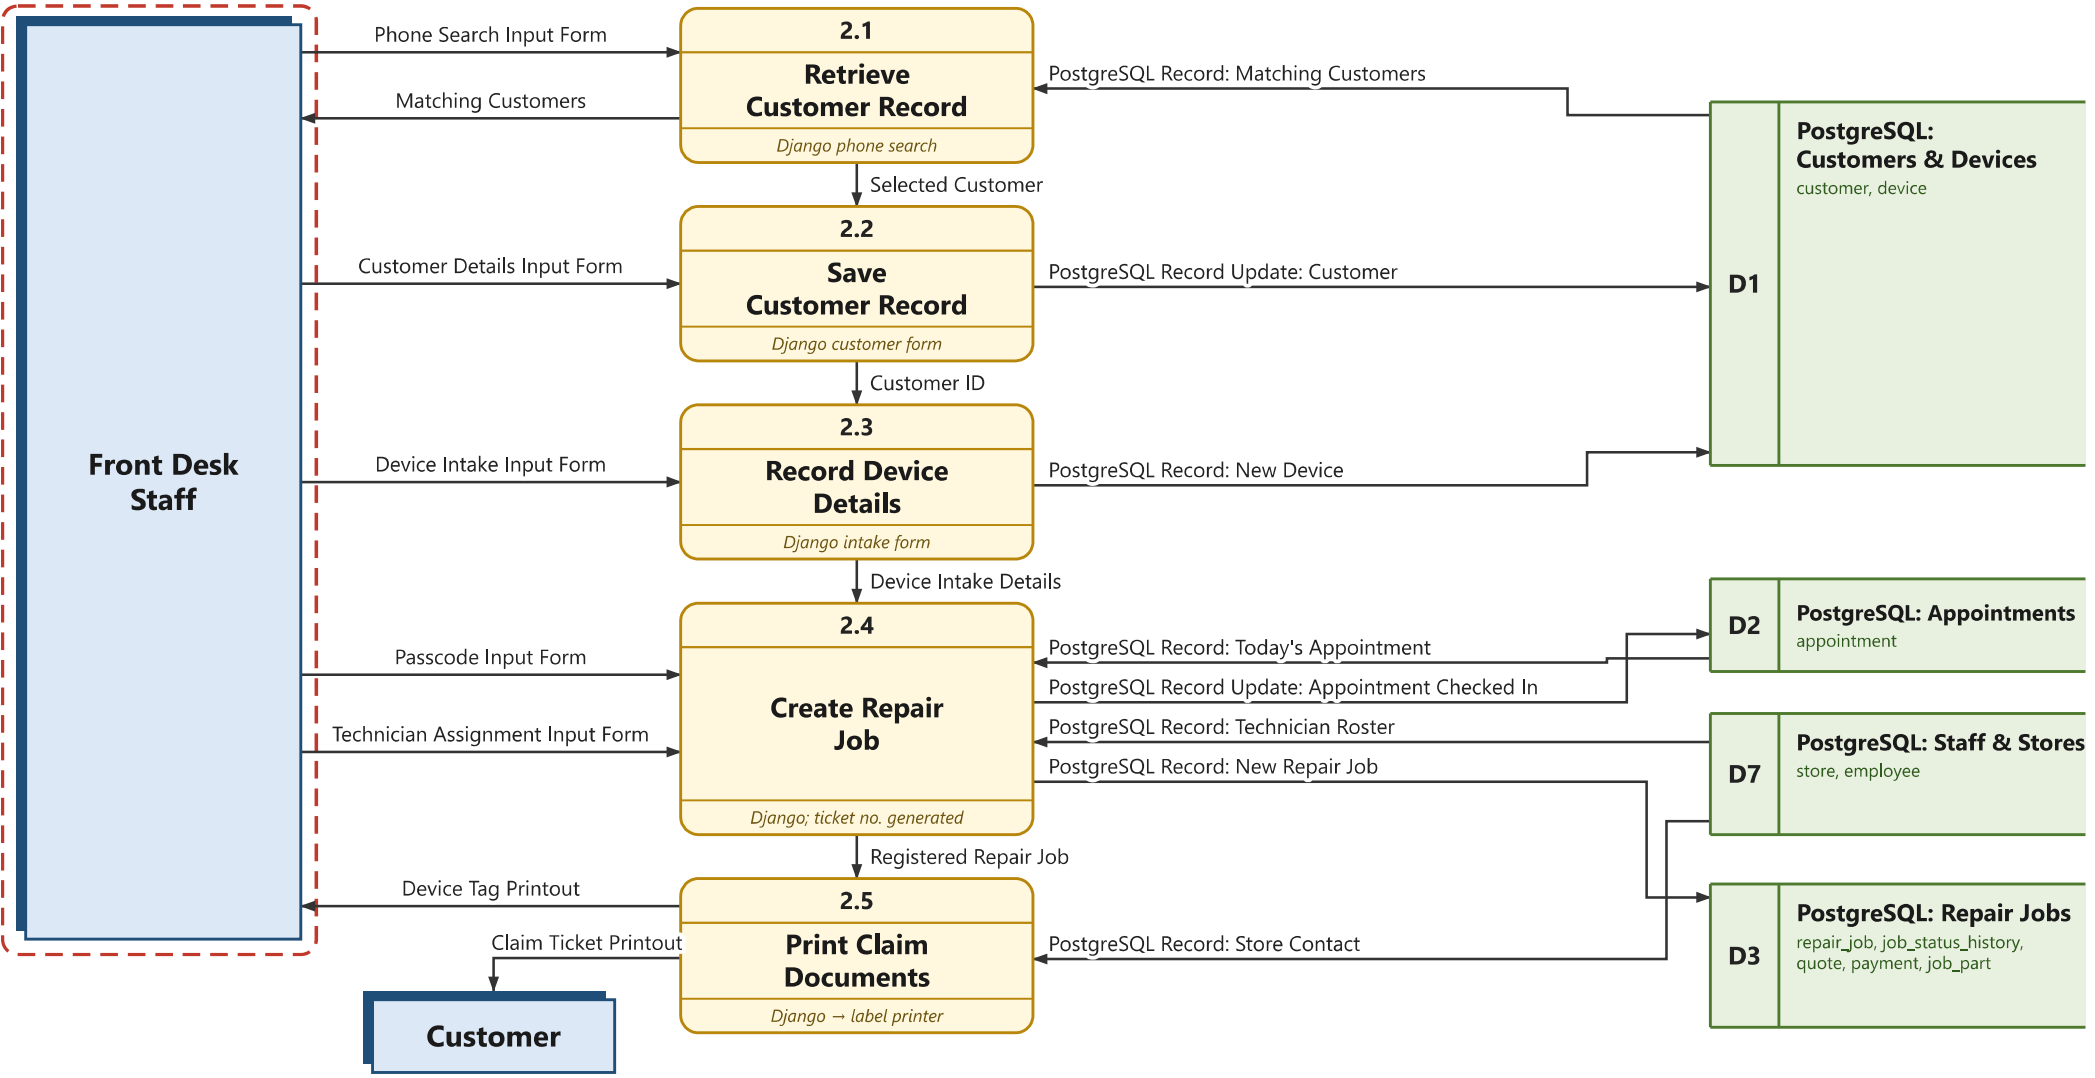

QuickPhone — Level 1 DFD: 1.0 Schedule Appointment (physical)

Optional appointment booking (FR01, UC-12). A walk-in needs no appointment; 2.0 pre-fills a job from one when it exists.

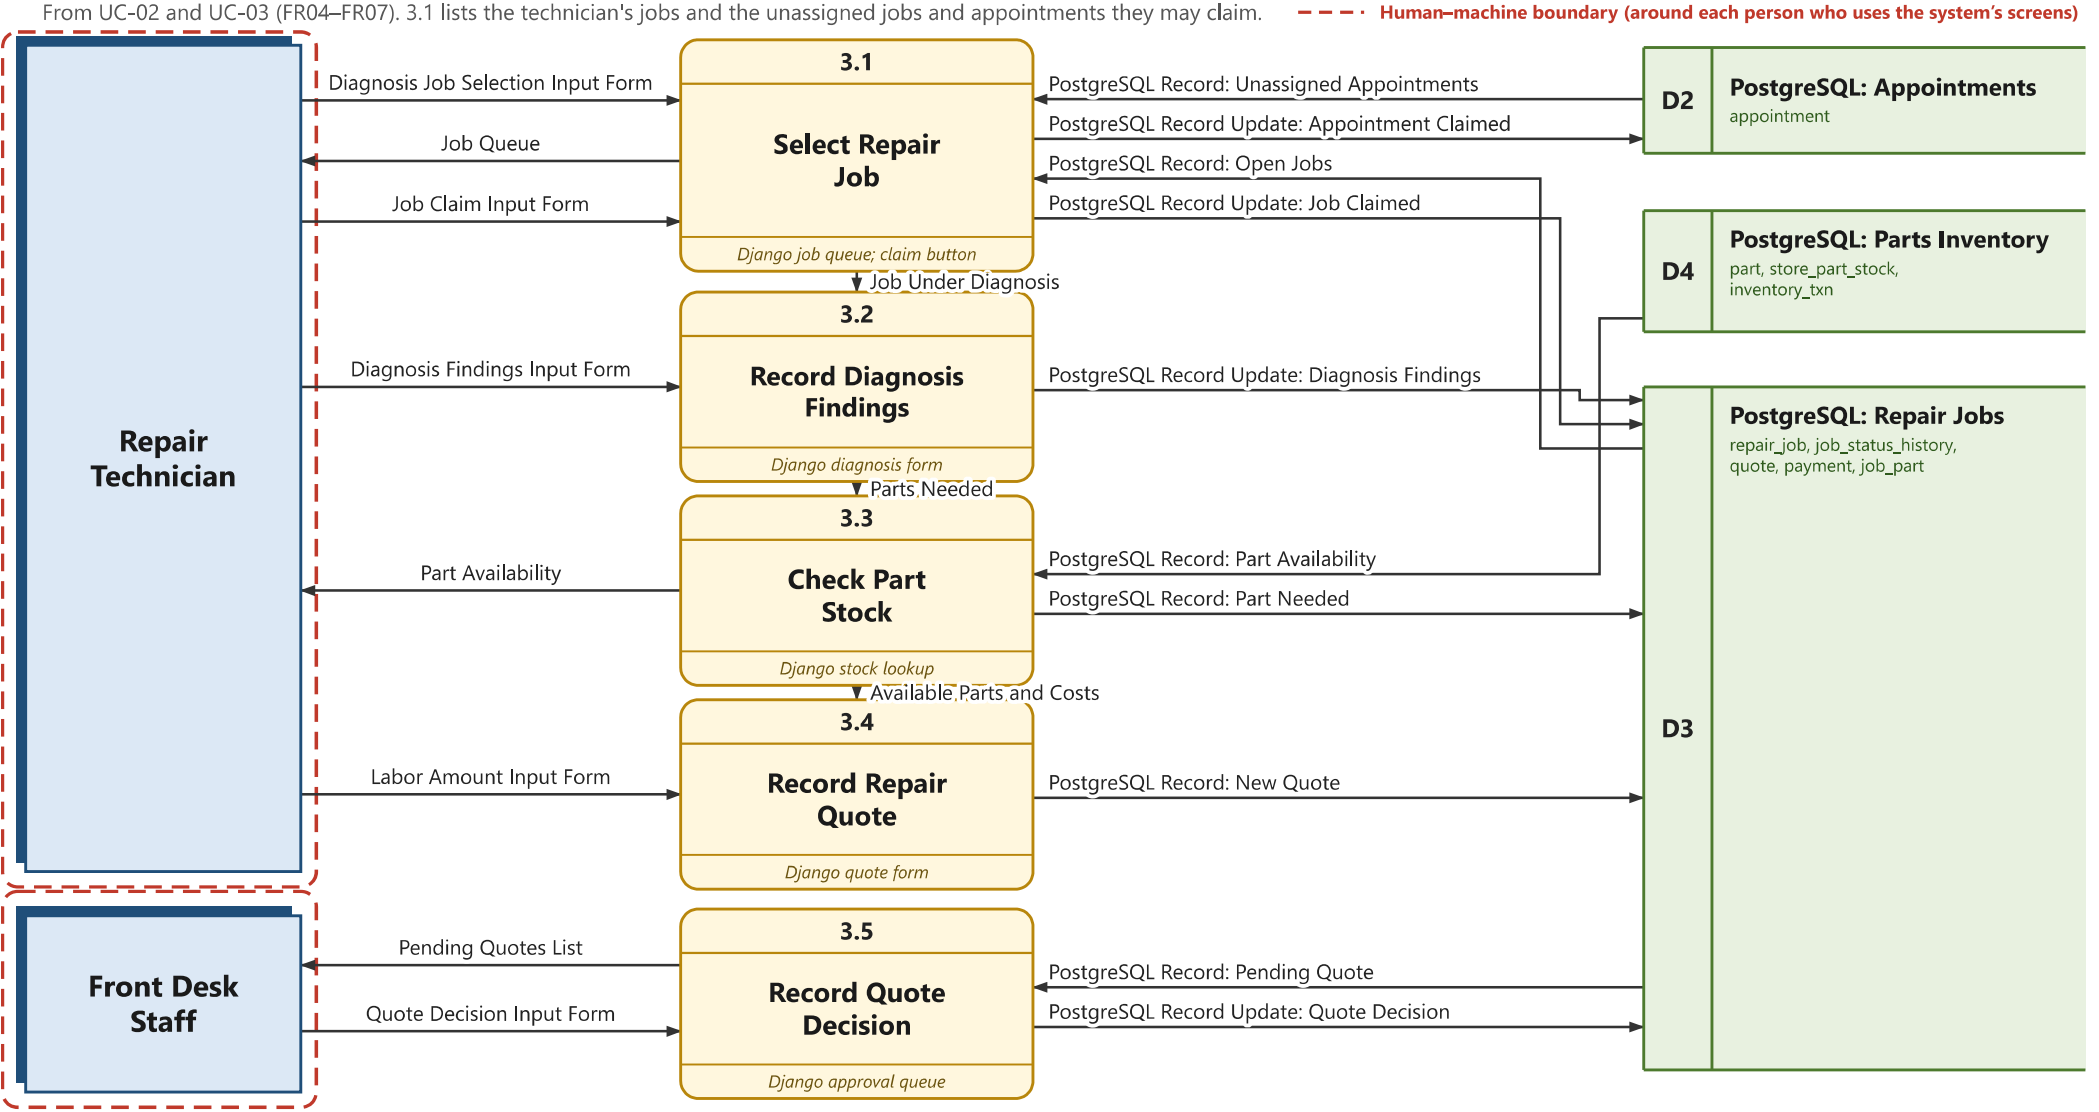

QuickPhone — Level 1 DFD: 2.0 Register Repair Job (physical)

From UC-01 and FR02–FR04. The passcode is optional (needed for camera repairs) and stored encrypted; the technician is optional.

QuickPhone — Level 1 DFD: 3.0 Record Diagnosis (physical)

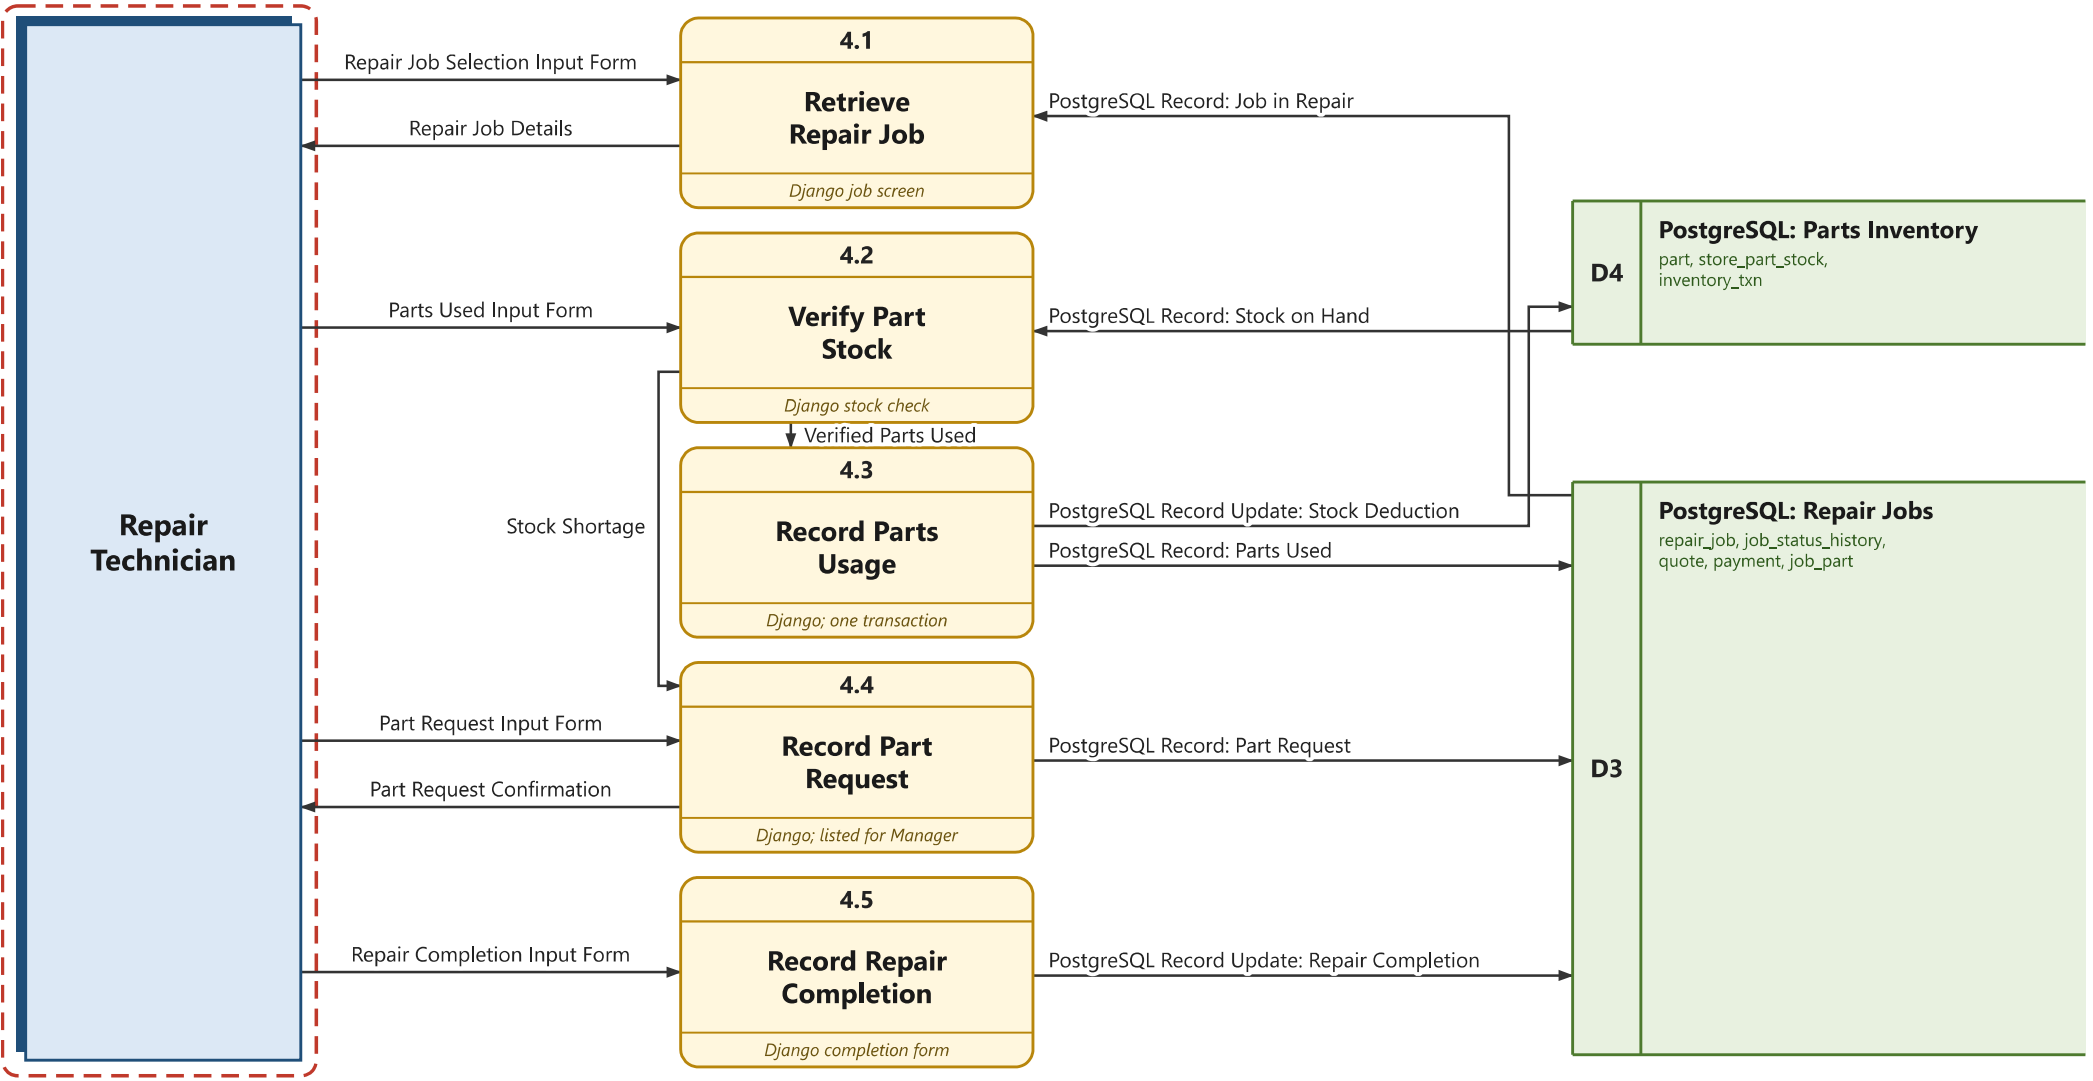

From UC-02 and UC-03 (FR04–FR07). 3.1 lists the technician's jobs and the unassigned jobs and appointments they may claim.

QuickPhone — Level 1 DFD: 4.0 Record Repair Work (physical)

Human–machine boundary (around each person who uses the system's screens)

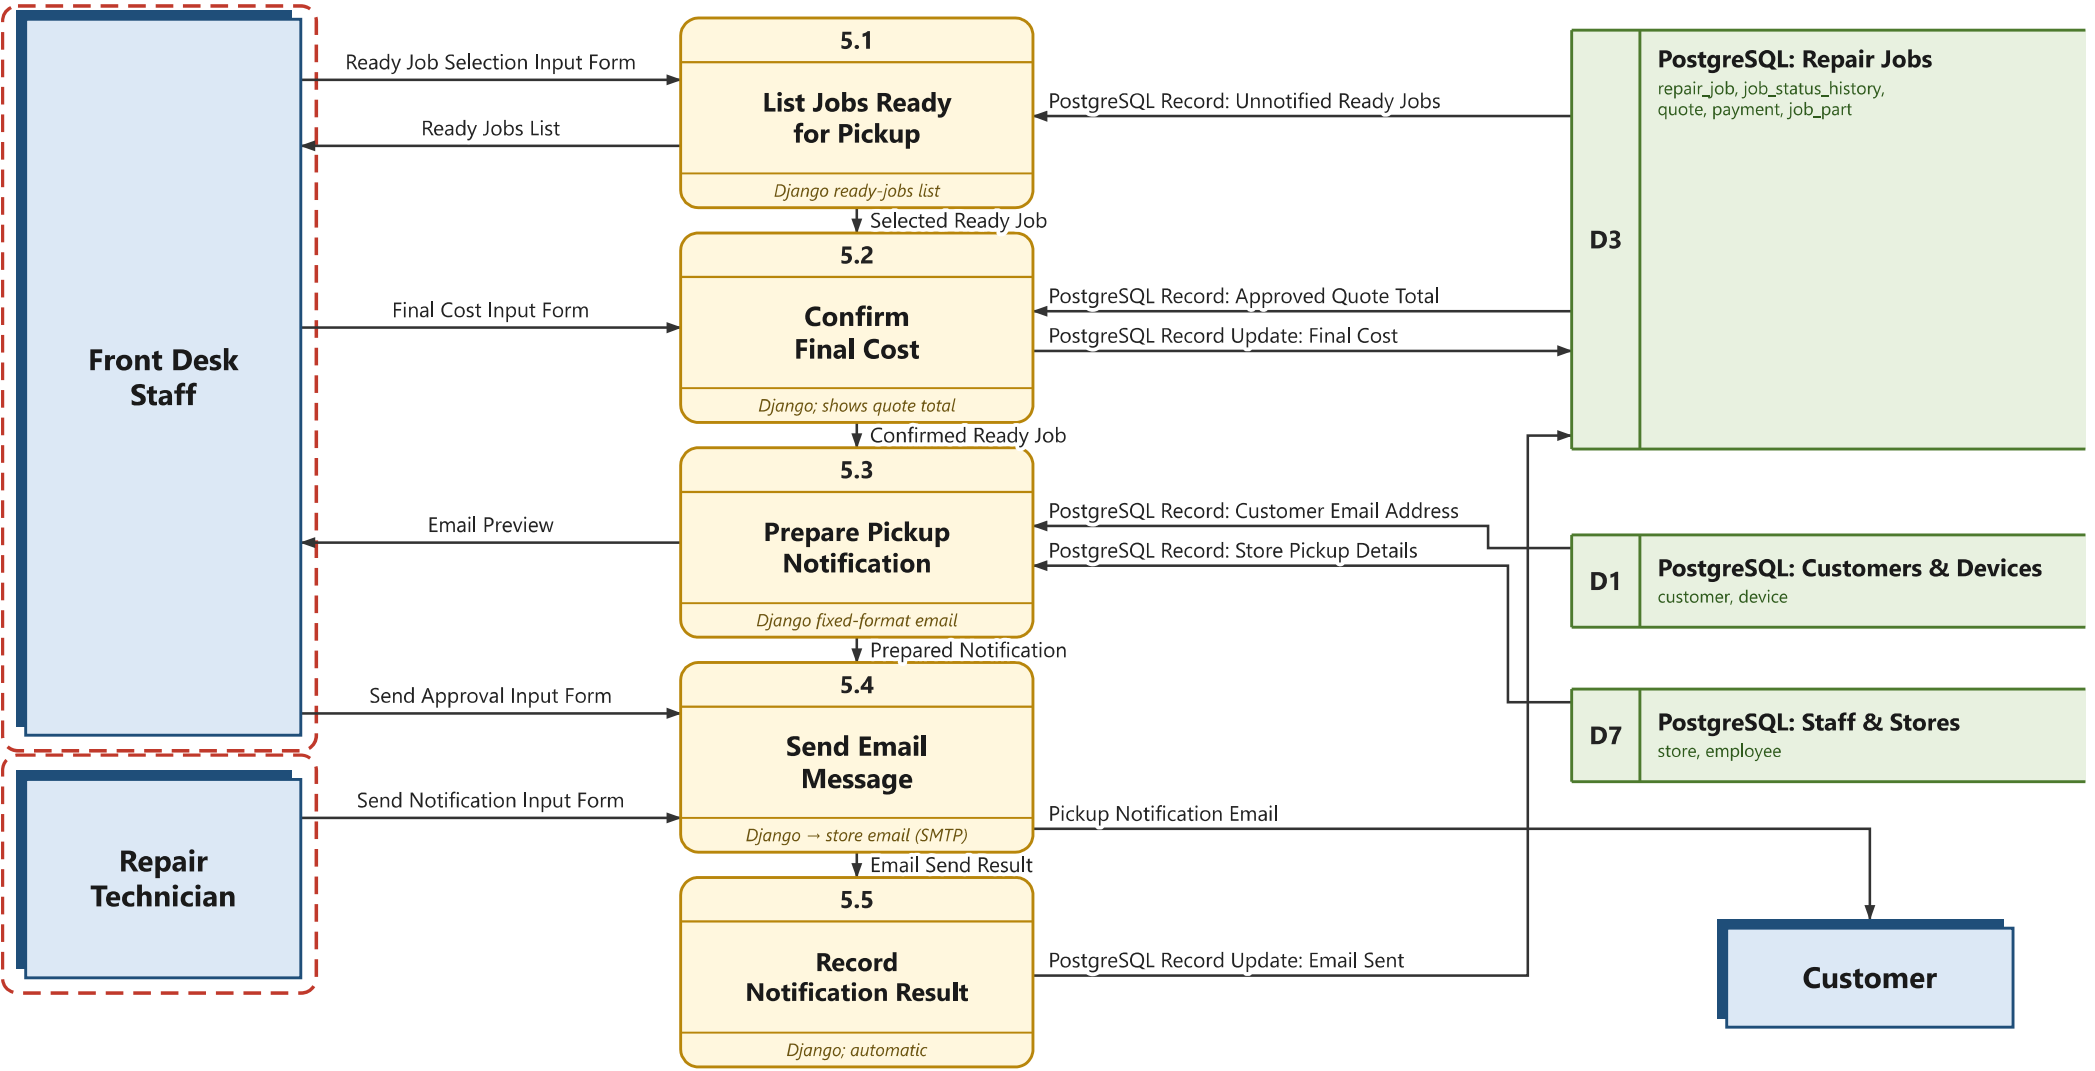

From UC-04 (FR06, FR07). A part used is deducted from stock automatically; a part request goes to the Manager, who orders it.

QuickPhone — Level 1 DFD: 5.0 Send Pickup Notification (physical)

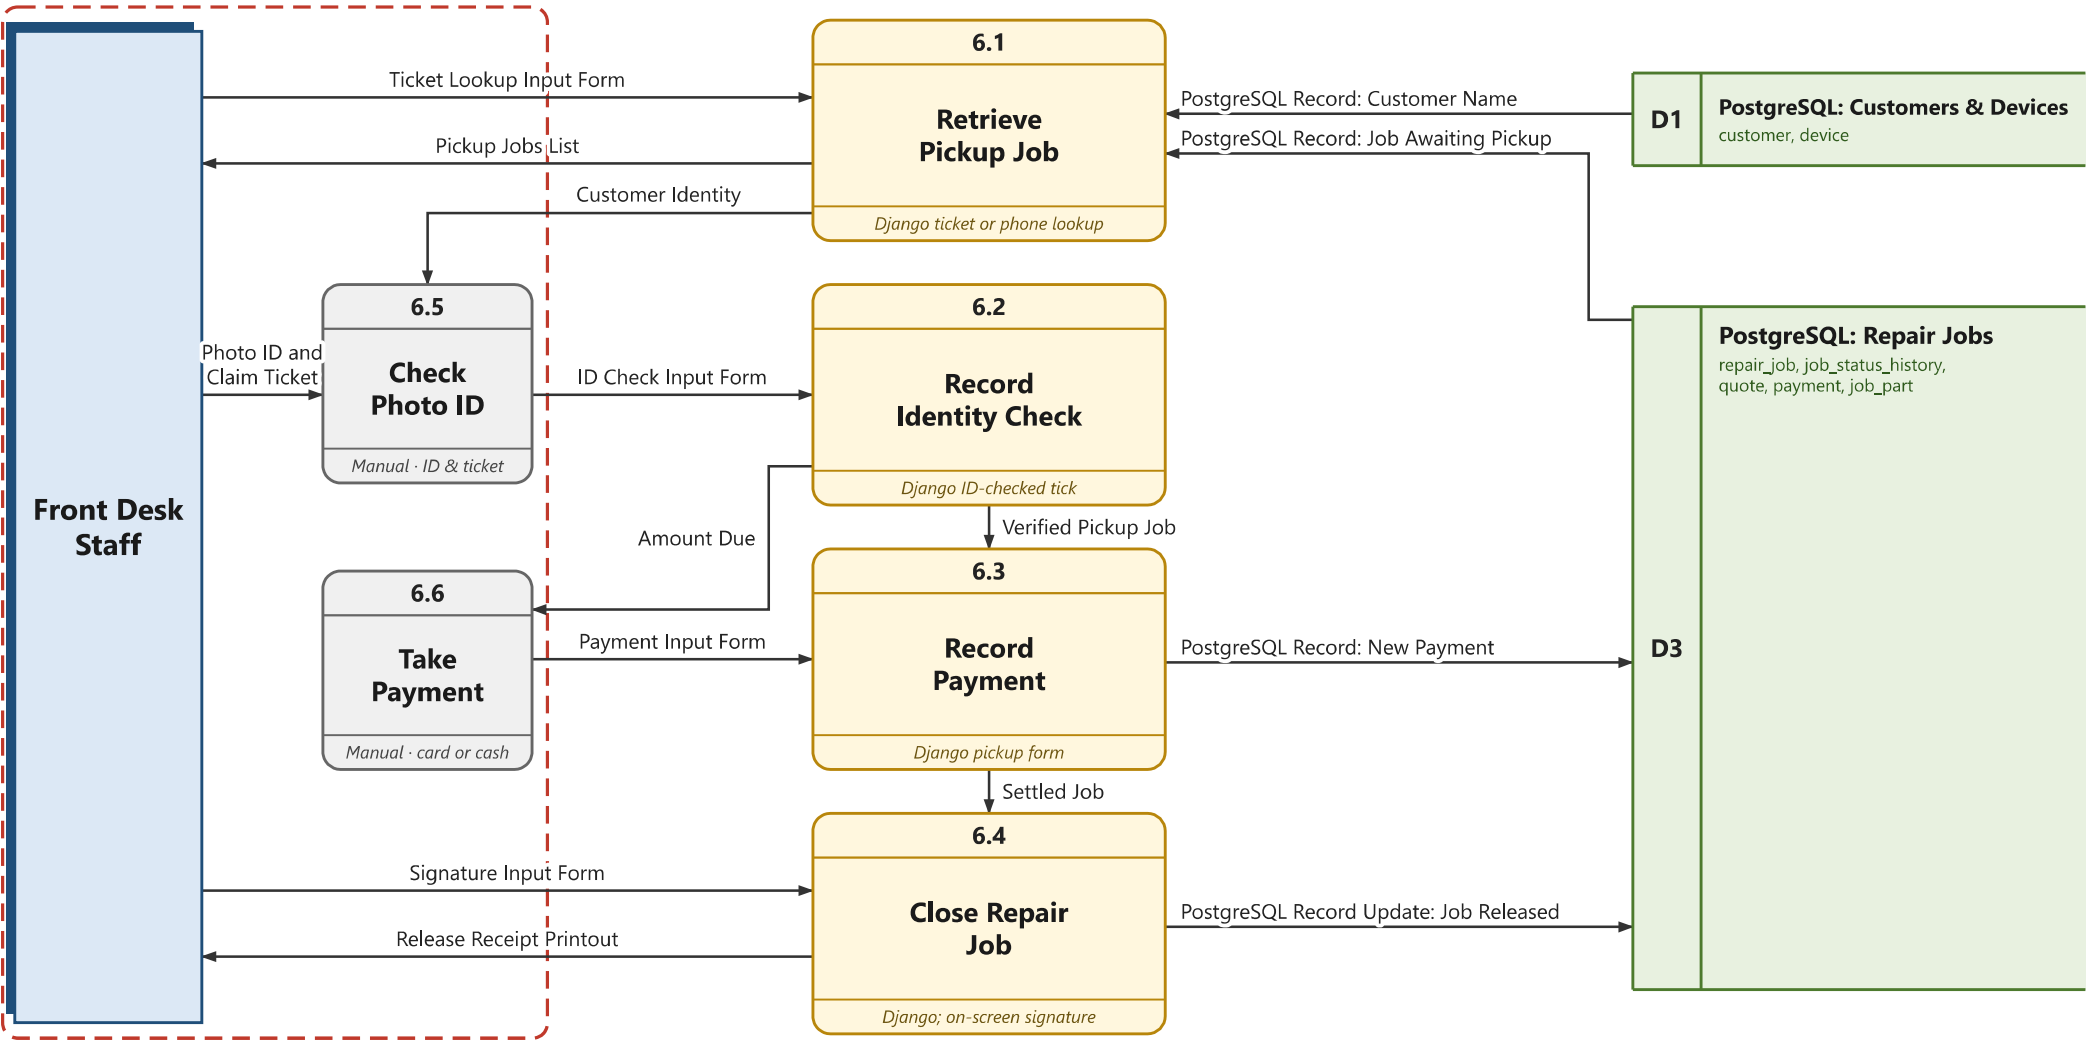

Human–machine boundary (around each person who uses the system's screens)

From UC-05 (FR12). Sent only on a click: Send Approval (staff) or Send Notification (Technician); the Technician never sees the address.

QuickPhone — Level 1 DFD: 6.0 Record Device Release (physical)

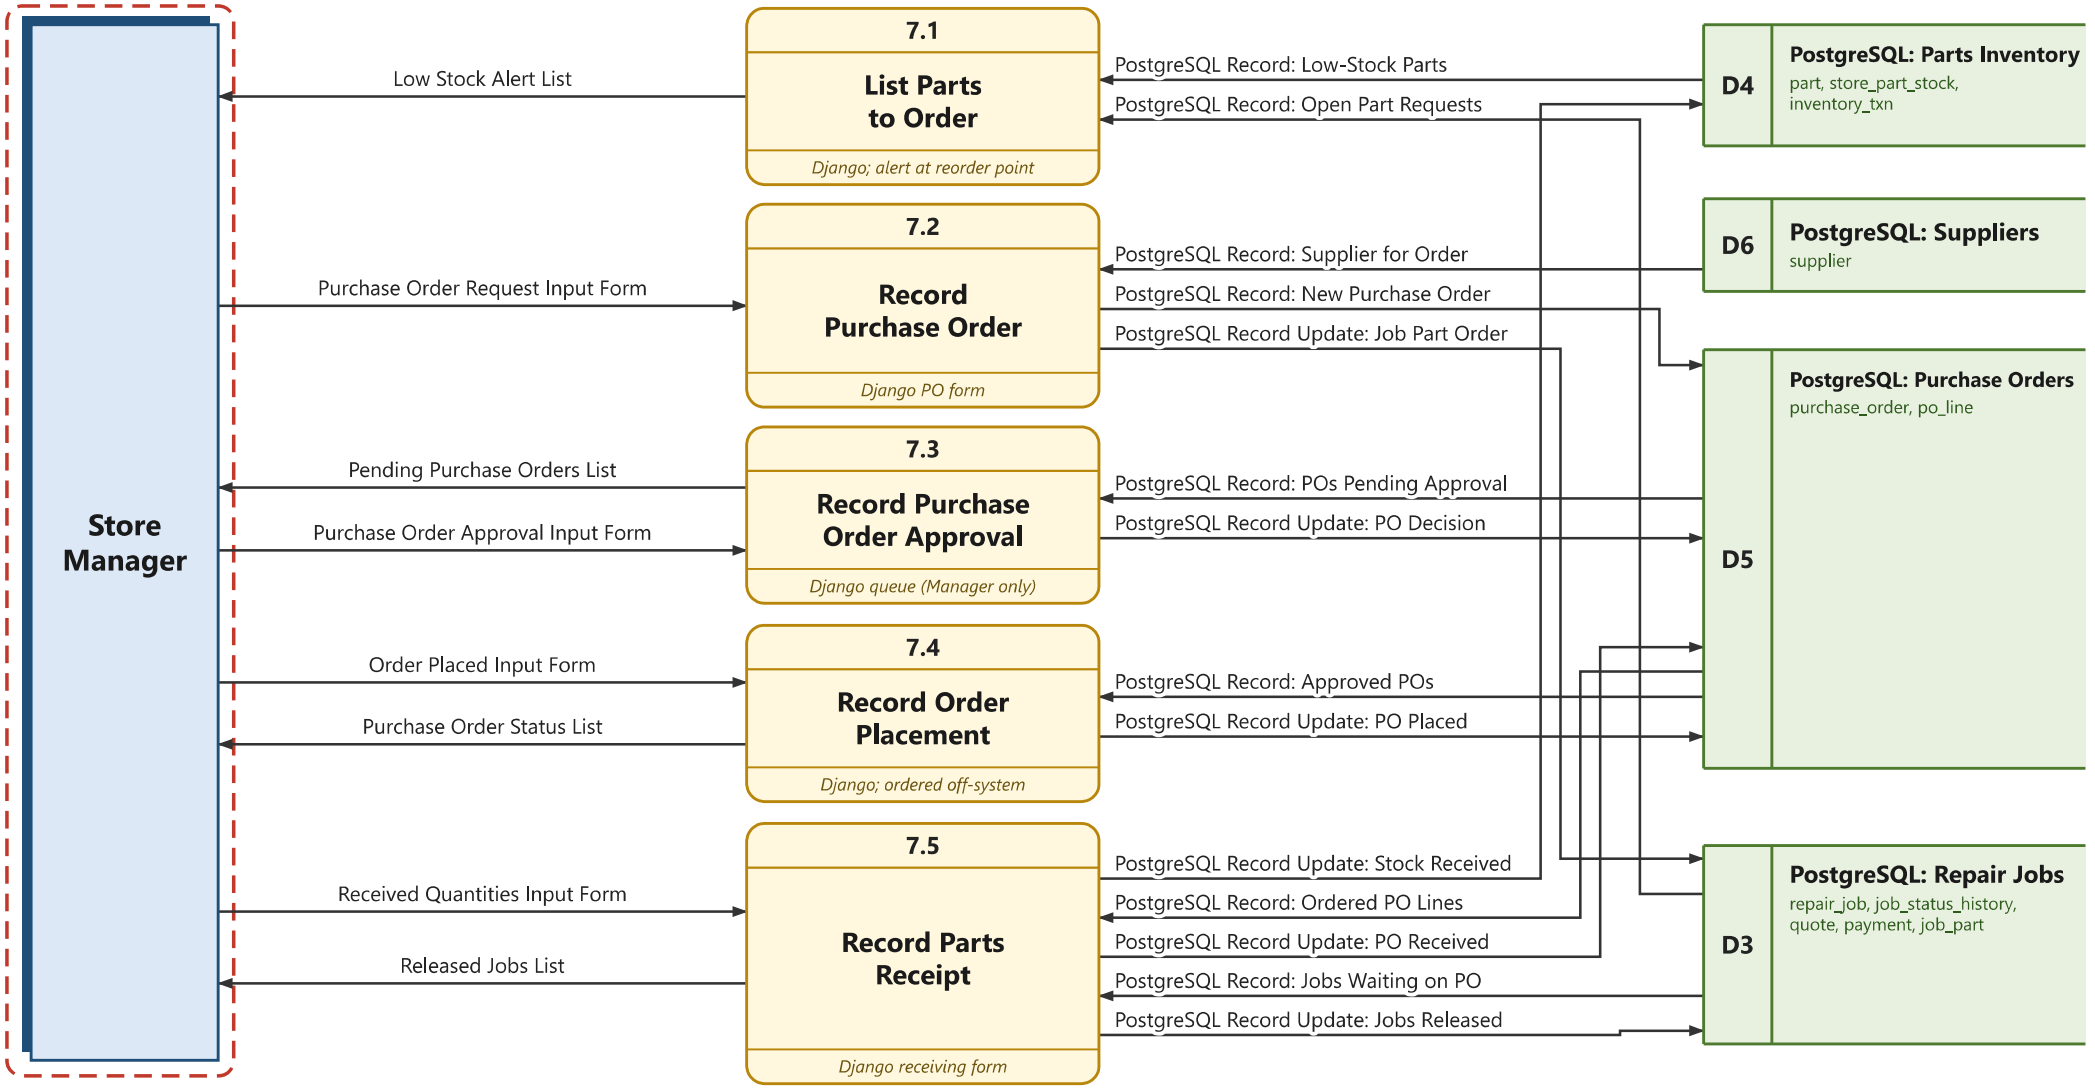

From UC-06 (FR08). 6.5 and 6.6 are manual. An unrepairable device owes nothing (no diagnostic fee), so 6.3 settles it with no payment.

QuickPhone — Level 1 DFD: 7.0 Process Purchase Orders (physical)

Human–machine boundary (around each person who uses the system's screens)

From UC-08 to UC-10 (FR09, FR10). A Manager approves every order and places it with the supplier outside the system; nothing is ordered automatically.

QuickPhone — Level 1 DFD: 9.0 Maintain Shop Records (physical)

From UC-07 and UC-11 (FR09, FR11, FR14). 9.5 adds the one-time CSV import of starting inventory as a batch process.
