QuickPhone — Level 1 DFD: Process 2.0 Register Repair Job (logical)

From UC-01 Check In Device and FR02–FR04. Process names say what the system does: retrieve, save, record, create, print.

Instructor feedback applied: "Identify Customer" (a user goal) is now 2.1 Retrieve Customer Record and 2.2 Save Customer Record (create or update), both system actions.
A booked appointment is optional (FR01): 2.4 reads it to pre-fill the job and marks it Checked In; walk-ins skip that read. Customers without email are saved with no email and flagged (UC-01 2a).
