QuickPhone — Level 1 DFD: Process 9.0 Maintain Shop Records (physical)

From UC-07, UC-11, FR09, FR11, FR14 and NFR06. Physical adds 9.5 Import Inventory File (batch) and 9.6 Back Up Database (nightly; reads every store once).

9.5 validates each CSV row, loads valid rows in one transaction and reports rejected rows (FR11). 9.6 copies every store nightly to an off-site location and logs it; restore tests are recorded (NFR06).
Passwords are stored only as a salted hash; a Manager cannot assign the Owner role (FR14). Count adjustments require a reason (CHECK on inventory_txn).
